                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "NEGO human cDNA sequencing project.";
Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Helicase that acts as a transcriptional co-activator for peroxisome proliferator activated receptor alpha (PPAR-alpha).
-!- SUBUNT: Interacts with PPARA, ESR1, THRB and RXRA. It is probably part of the peroxisome proliferator activated receptor alpha interacting complex (PRIC).
-!- SUBCELLULAR LOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE OF 2204-2649 FROM N.A.

DOMAIN: Contains 5 Leu-Xaa-Xaa-Leu-Leu (LXXLL) motifs.

SIMILARITY: Contains 1 C2H2-type zinc finger.

SIMILARITY: Belongs to the DNAZ/NAM helicase family.

CAUTION: Ref.1 experiments have been carried out partly in rat and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "The DNA sequence and comparative analysis of human chromosome 20."; Nature 414:865-871(2001).

FUNCTION: IRBP shuttles 11-cis and all trans retinoids between the retinol isomerase in the pigment epithelium and the visual pigments in the photoreceptor cells of the retina.
SUBCELLULAR LOCATION: Interphotoreceptor matrix that permeates the epithelium cells.
TISSUB SPECIFICITY: Expressed in the photosensitive tissues;

NA Res. 2.153-166(1955).

C. - CATALYTIC ACTIVITY: ATP + L-valine + tRNA(Val) = AMP + diphosphate + L-valy-tRNA(Val).

C. - CATALYTIC MOTOMER (By similarity).

- SUBMILARITY: Monomer (By similarity).

- SUBMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. SIMILARITY: TO THE C.KUJYVERI NADD-DEPRNDENT SUCCINATE
SEMILADEHYDE DEHYDROGENASE (SUCD) (IN THE N-TERMINAL SECTION).
SIMILARITY: In the C-terminal section; belongs to the iron-
containing alcohol dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CATALYTIC ACTIVITY: Acetaldehyde + CoA + NAD(+) = acetyl-CoA +

7: Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
